B. S. North Texas State Teachers College, B. S. in Library

Science University of Illinois

H. W. STILWELL—Ethics B. A., M. A. University of Texas

*Leave of Absence-Military Service.

CALENDAR 1943-1944

Registration	September 9, 10
Classes Begin	September 13
Armistice Day	November 11
Thanksgiving Holidays	November 25, 26
Christmas Holidays	Dec. 23-Jan. 2
First Semester Closes	January 22
Second Semester Begins	January 24
Easter Holidays	April 7-10

SUMMER SESSION 1944

Short Term	.May	29-July	1
Regular TermJuly	3-Se	ptember	1
Subject to Modification.			

GENERAL INFORMATION

FOUNDING AND LOCATION. The Texarkana College was founded in 1927 as a part of the Texarkana, Texas Public School System. Until 1940 the College had to operate on the tuition and fees paid by students. At this time the School Board was authorized by a special election to maintain a twenty cent tax for the Junior College. This, together with the Junior College State Aid of \$50.00 per full time student, which was enacted in 1941 had enabled the College to lower the cost until two years of college education are in reach of every boy and girl in this community.

Since the establishment of the College the enrollment has more than doubled. The College provides the opportunity to secure college training for a large number of young men and young women who never would have had this advantage otherwise.

Texarkana is a rapidly growing city of about 50,000 population. It is a railroad center and has experienced rapid development with the establishment of war plants in this area. With the industrialization that may follow the war Texarkana promises to become an important center of trade. The Texarkana College expects to expand and continue to meet new needs as they arise.

STANDING AND CLASSIFICATION. The Texarkana College has the highest ranking obtainable by this type of institution. In December, 1931, the College was accredited by the Association of Colleges and Secondary Schools of the Southern States. This is the highest rating that can be attained by a Junior College.

The College is also accredited by the Association of Texas Colleges and is a member of the American Association of Junior Colleges.

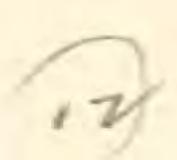

The above ratings give the work done at the College full recognition and acceptance at standard senior colleges and universities.

The Texarkana College is rated as first class by the Departments of Education of both Arkansas and Texas, and work done here is acceptable for teachers' certificates in both states.

CARE AND OVERSIGHT OF STUDENTS. Close personal supervision is given students by the faculty. This personal contact with the instructors is one of the chief advantages of the municipal college. The College faculty is at all times solicitous of the welfare of the students, taking an interest in the outside activities as well as in the regular classwork.

BUILDINGS AND EQUIPMENT. The Texarkana College is housed in a modern, two story brick building. The library consists of more than 5000 volumes of carefully selected books including recent publications as well as the standard reference material. The physics, biology, and chem-

istry laboratories are well equipped for the work offered. The value of equipment in these fields is approximately \$10,000. New equipment is added each year in addition to replacement of worn or out-of-date equipment. The gymnasium will accommodate the physical development program and serves as a recreation center. An auditorium with a large stage is available for assemblies and play production.

THE JUNIOR COLLEGE

DEVELOPMENT AND STATUS. Junior Colleges for the last twenty years have played an important part in higher education in Texas. Until 1920 the independent junior colleges, composed of privately owned and denominational schools, were the only two-year colleges in Texas. In 1920 the publicly owned junior college made its appearance in the state, and today there are twenty such colleges.

The total attendance of junior colleges in Texas in 1941-1942 reached more than 18,000 students. This is a good percentage of the total graduates of the high schools, approximately 30,000 annually. California has a total attendance of over 100,000 in the junior colleges. At the present rate of growth, Texas junior colleges will within a decade be caring for a large percentage of the high school graduates.

The public junior college movement in Texas received encouragement by an act passed by the Forty-first Legislature which permits independent school districts, unions of such districts, counties or a union of counties to form a junior college, provided that such a district has 400 scholastics and an evaluation of twenty million dollars. The act served also as a restriction to those districts which could not maintain a junior college because of lack of financial support.

In the last report of the American Association of Junior Colleges there were 495 such public junior colleges of this type in the United States, distributed in all the states except two. California leads with 48; Texas and Missouri follow as close seconds.

The junior college movement is growing rapidly over the United States. The tendency is for the number of students in the junior colleges to increase and to go directly from the junior colleges to the universities and technical schools.

A bill was passed by the Legislature in the spring of 1941, giving \$50.00 per student to all recognized public junior colleges. This makes the public junior college in Texas an integral part of the educational system. More students will be able to secure training near home at a moderate price.

GENERAL ADVANTAGES OF JUNIOR COLLEGE TRAINING

1. It is possible to do in junior colleges the first two years of the

GENERAL RULES AND REGULATIONS

The requirements for graduation, general rules and regulations, requirements for admission, grades, and reports are the same as set forth in the announcements for 1941-1942, pages 5-12 inclusive.

GUIDANCE

Educational - Vocational - Personal - Social

The College is instituting a special guidance program designed to be used by all students and to be of aid to all. A Director of Guidance will maintain regular office hours for consultation and advice for both students and parents. These conferences may be held upon the initiative of student or parent, but in addition the Director will seek such conferences himself in order that he may be of the greatest service possible.

From a detailed study of the life and education of the student, from special aptitude and ability tests, from inquiry into the interests and aims of the student, the Director will try to help the student determine the best plans for continued education beyond the Texarkana College, the most promising lines of vocational preparation to follow, and the most available fields of occupation to look forward to.

Counsel and advice will be extended upon personal and social problems as they develop and as students and parents may desire.

It is planned to reach every student in the College as soon after he enters as possible, and even before he registers when the service is organized and established.

ADULT AND EVENING COURSES

With the hope that the College may be of greater service to the community, plans are being considered to hold evening classes for adult education. These classes may be organized either on the hour credit basis or as non-credit courses.

Credit courses in the regular curriculum would be offered to a minimum of ten (10) students desiring the course who are employed and unable to attend the reuglar day classes. These subjects would be of the same nature as the day curriculum work and would meet for one and one-half hour periods twice per week, or one hour periods three times per week. The non-credit courses would be in the field of salesmanship, business mathematics, office procedure, business English, typing, shorthand, mechanical drawing and other similar courses.

The time and effort devoted to this phase of work will depend upon the demand for it.

NATIONAL DEFENSE

Realizing that all educational institutions have a tremendous responsibility in the National War Effort, the Texarkana College has taken advantage of every opportunity to cooperate in helping to prepare for the preservation of all democratic ideals.

Through cooperation with the State Board of Vocational Education a War Industries Training School was established in June, 1941, for the purpose of training skilled welders for employment in the shipyards. Over 700 welders, a sufficient number of men to complete the work of building a destroyer in four weeks, have been trained in this shop. 361 trainees have completed work in this shop during the past school year 1942-43. In addition to the ship construction training, supplementary training for welders in local industries has recently been established.

The Texarkana College has during the past twelve months cooperated with the Engineering Department of the University of Texas in conducting technical training through the Engineering, Science, and Management for War Training provided for by the U. S. Office of Education. During this time four courses of Industrial Safety, three courses for Radio Technicians, two courses of Personnel Management, and one course of Laboratory Technician, have been completed. All of these classes have rendered direct service for local industries and especially defense plants located in this area.

On November 6, 1941, the Texarkana College and Mr. Jack D. Stuart entered into a joint contract with the Civil Aeronautics Administration for collegiate training in ground courses and flight instructon. Under this Civil Pilot Training program 70 students completed sufficient work to qualify them for private pilot license. The majority of these individuals have now gone into the Armed Service or other branches of Service directly related to the War Effort.

In July, 1942, this flight training program was converted into the War Training Service in which only enlisted men were enrolled. Under this new War Training Service program 100 men "part Army and part Navy," have been given elementary flight training.

The Texarkana College has cooperated with the Armed Services of the United States in its selection of young men for the Service. A number of male students of military service age have been assisted in enlisting in the reserves of the various branches of the Services so that they might continue their academic training to the best advantage of the Services. Courses were designed and adjusted to meet the needs of these men in preparation for their future active service.

Plans are under way for the coming year to establish a pre-induction program in which young men may pursue academic courses and at the same time develop mechanical skills that are urgently needed at this time by the Service.

SEMI-PROFESSIONAL, TECHNICAL, AND VOCATIONAL COURSES

According to statistics only one out of four in this area who enter college complete the work for a Bachelor's degree. These students who do not complete their four years need special advanced training in some sort of technical education. The Texarkana College is attempting to meet this need by expanding the commercial and mechanical program.

These courses are not designed so much to meet the academic requirements of the senior colleges as to give training to fit the needs of the individual student. This enables students to have more freedom in the selection of courses with the elimination of many prerequisites.

The extent to which this program is expanded will depend on the number of students who are interested in such a program. These courses will require the same standards of work required in the regular academic field.

PROGRAMS OF STUDY

(The following arrangements of courses meet the requirements of representative universities and professional schools. These are suggestive only and should be modified to meet the need of individual students and the requirements of institutions for advanced work.
